p(CO$_2$) Air-Sea Instrument Package Specification

Coastal and Global Scale Nodes

Ocean Observatories Initiative

Woods Hole Oceanographic Institution

Oregon State University

Scripps Institution of Oceanography

Revision History

Version	Description	Originator	ECR No.	Release Date
1-00	Initial Release, per ECR 1303-00082	S. White	1303-00082	02 June 2010
2-00	Update to new template	S. White	1303-00128	06 October 2010
2-01	Updated definitions, added SOFT-001, INTF-013, QUAL-004, Appendix 4.1	S. White	1303-00208	09 February 2011

OOI Senior Systems Engineer: _____

Table of Contents

1.0 General

1.1 Ocean Observatories Initiative (OOI) Overview

Although the ocean is central to the habitability of our planet, it is largely unexplored. Biological, chemical, physical, and geological processes interact in complex ways in the ocean, at the seafloor, and at the air-sea interface. Our ability to learn more about these processes is severely limited by technical infrastructure, and developing a more fundamental scientific understanding of these relationships requires new and transformational approaches to ocean observation and experimentation.

The Ocean Observatories Initiative (OOI) will lay the foundation for future ocean science observations. OOI will enable powerful new scientific approaches by transforming the community's focus from expedition-based data gathering to persistent, controllable observations from a suite of interconnected sensors. The OOI's networked sensor grid will collect ocean and seafloor data at high sampling rates over years to decades. Researchers will make simultaneous, interdisciplinary measurements to investigate a spectrum of phenomena including episodic, short-lived events (tectonic, volcanic, oceanographic, biological, and meteorological), and more subtle, longer-term changes and emergent phenomena in ocean systems (circulation patterns, climate change, ocean acidity, and ecosystem trends).

The OOI will enable multiple scales of marine observations that are integrated into one observing system via common design elements and an overarching, interactive cyberinfrastructure. Coastal-scale assets of the OOI will expand existing observations off both U.S. coasts, creating focused, configurable observing regions. Regional cabled observing platforms will 'wire' a single region in the Northeast Pacific Ocean with a high speed optical and high power grid. Global components address planetary-scale changes via moored open-ocean buoys linked to shore via satellite. Through a unifying cyberinfrastructure, researchers will control sampling strategies of experiments deployed on one part of the system in response to remote detection of events by other parts of the system.

A more detailed discussion of the Oceans Observatories Initiative can be found in the OOI Final Network Design.

1.2 Document Scope and Purpose

The purpose of this specification is to provide the requirements for a Partial Pressure of CO_2 ($p(CO_2)$) Air-Sea instrument package to be purchased for use on the Coastal and Global Scale Nodes (CGSN) of the Ocean Observatories Initiative. $p(CO_2)$ air-sea instrument packages will be mounted on surface buoys which will be deployed in both coastal regions (depths up to 500 m) and open ocean regions (at latitudes above 40 degrees).

This document describes the physical, functional and electrical characteristics of $p(CO_2)$ Air-Sea instrument packages required by CGSN.

1.3 Documents

1.3.1 Informational

The documents listed in this section are for informational purposes only and may not have been referenced in this specification.

1.3.2 Applicable

N/A

1.4 Definitions

1.4.1 Glossary and Acronyms

- **Accuracy** – Closeness of the agreement between the result of a measurement and the value of the measurand (or true value of the measurement). (Taylor and Kuyatt, 1994)

- **Burst Sampling** – Intermittent rapid sampling at or near the maximum sampling rate for short intervals between longer quiescent periods.

- **Certificate of Compliance** – A certificate provided by the manufacturer stating that the unit is compliant with the requirements in the specification, has passed testing with records maintained by QA/QC at the vendor, and contains materials as agreed at the design reviews.

- **CGSN** – Coastal and Global Scale Nodes

- **EIA** – Electronics Industries Association

- **Instrument** – A device that contains one or more sensors and a method for converting the information from the sensor into a transmittable and storable form.

- **Objective Value** – The desired value of a technical parameter. This value, if provided, may be more challenging to achieve than the Threshold value. It is a goal, not a requirement, for the instrument.

- **OOI** – Ocean Observatories Initiative

- **Operate** – Correctly performing designed functionality.

- **Precision -** The closeness of agreement between independent measurements obtained under stipulated conditions of repeatability, generally expressed as a standard deviation (or standard uncertainty) of measurement results (Taylor and Kuyatt, 1994). Used as a measure of stability of an instrument/sensor and its capability of producing the same measurement over and over again for the same input signal.

- **Resolution** - The smallest amount of input signal change that the instrument/sensor can detect reliably.

- **PSS** – Practical Salinity Scale, the UNESCO Practical Salinity Scale of 1978 (PSS78) defines salinity as a dimensionless conductivity ratio.

- **Sensor** – A device that will convert a physical phenomenon into an electrical signal that can in turn be digitized through the use of an analog to digital converter. A sensor is normally housed in an instrument. Data coming from sensors is normally raw and needs to be calibrated.

- **Survive** – Experience an event without major loss of hardware. System may experience loss of functionality requiring repair to return to normal mode functionality. An example of this is knockdown of a global mooring or loss of some part of the mooring resulting in the instrument descending to the bottom. Any internal memory in the instrument shall remain accessible, but the sensors may need to be replaced to return to normal functionality.

- **Sustain** – Experience an event (environmental extreme or condition) without permanent loss of normal mode functionality. System may experience reduction of functionality during event.

- **Threshold Value** – The limiting acceptable value of a technical parameter. If this item does not meet the performance as specified by the threshold value it may not be sufficient for inclusion in the OOI system.

1.4.2   Conventions

All values contained in this document are Threshold Values unless specifically stated otherwise.

Specification items are assigned unique identification numbers specific to this document. Items tied directly to requirements maintained in the OOI requirements database are followed by the requirement number in brackets (e.g., [L4-CG-IP-RQ-XXX]). The requirement number is intended for internal OOI use only.

2.0   Specifications

2.1   Measurement

Values provided are threshold unless otherwise stated.

   2.1.1 $p\,(CO_2)$
   a)   Measurement with unit(s)
   Partial pressure of carbon dioxide (µatm)
   b)   Minimum Value
   PCO2-001 $p(CO_2)$ instruments shall have a range with a minimum value of 0 µatm in air and in water. [L4-CG-IP-RQ-204]
   c)   Maximum Value
   PCO2-002 $p(CO_2)$ instruments shall have a range with a maximum value of 2000 µatm in air and in water. [L4-CG-IP-RQ-204]
   d)   Accuracy
   PCO2-003 $p(CO_2)$ instruments shall have an accuracy of ±2 µatm in air and in water. [L4-CG-IP-RQ-198]
   e)   Precision
   PCO2-004 $p(CO_2)$ instruments shall have a precision of 1 µatm in air and in water. [L4-CG-IP-RQ-199]
   f)   Resolution
   N/A
   g)   Drift
   N/A
   h)   Response Times
   N/A
   i)   Sampling Frequency
   PCO2-005 $p(CO_2)$ instruments shall be capable of sampling rate of no less than one time per hour. [L4-CG-IP-RQ-203]
   j)   Dependencies
   N/A

2.2   Operational

   2.2.1   Operational Depth Range
   N/A

   2.2.2   Environmental
   a)   Salinity
   OPER-001   Instruments shall be capable of operating in water salinities from 0 to 40 PSU. [L4-CG-IP-RQ-443]

b) Temperature

OPER-002   Instruments shall be capable of operating in water temperatures from -2° to +35° C. [L4-CG-IP-RQ-442]

OPER-003   Instruments shall be capable of making air-sea measurements within an ambient air temperature range of -30° C and +45° C. [L4-CG-IP-RQ-432]

c) Biofouling

OPER-004   Sensors shall utilize biofouling mitigation to enable nominal operations over the defined deployment interval. [L4-CG-IP-RQ-446; L3-CG-RQ-867]

d) Icing

OPER-005   Instruments mounted in air shall remain operable following periods of icing. [L4-CG-IP-RQ-405]

2.2.3 Service Requirements
N/A

2.2.4 Calibration Requirements

OPER-006   Sensors shall maintain their calibration over the required deployment intervals. [L4-CG-IP-286]

2.2.5 Deployment Interval

OPER-007   The designed deployment interval for instrument packages on moored assets shall be 13 months. [L3-CG-RQ-168; L3-CG-RQ-496; L3-CG-RQ-497]

2.3 Mechanical/Physical

2.3.1 Materials

MECH-001   Instrument electronics housings shall be designed to be corrosion resistant. [L4-CG-IP-288]

MECH-002   The instrument package and components mounted on surface buoys shall be capable of surviving immersion in seawater to a depth of 5 m. [L3-CG-RQ-886]

2.3.2 Size
N/A

2.3.3 Weight
N/A

2.4 Electrical

2.4.1 Interference Requirements
N/A

2.4.2   Voltage
N/A

2.4.3   Current
N/A

2.4.4   Power
N/A

2.4.5   Grounding
N/A

2.4.6   Battery Life
N/A

2.4.7   Modes/State of Operation
ELEC-001   Instruments shall return to a defined operational state upon being depowered and repowered. [L4-CG-IP-447]

2.4.8   Isolation
ELEC-002   All instrument electronics and electrical connections shall be isolated from seawater by greater than 10 megaohms.

2.5   Data Storage and Processing

2.5.1   Storage Capacity
DATA-001   Instruments shall provide non-volatile internal data storage. The data storage size shall accommodate data taken at the typical rate over the duration of the deployment interval.
DATA-002   Instruments should internally store calibration and sensors serial numbers. This is an objective.

2.6   Software/Firmware

SOFT-001   Serial instruments requiring a break signal should be capable of emulating the break by a software character sequence.

2.7   Platform Interfaces

2.7.1   Mechanical
N/A

2.7.2   Electrical
INTF-001   The instrument package shall connect to the platform controller for power and communications (the connector types on the CGSN platform controller housing are TBS and will be detailed in an interface control document).

INTF-013   The instrument should include a standard type of OOI bulkhead connector on the instrument housing (see Appendix 4.1). This is an objective.

INTF-002   The instrument package shall operate from a supply voltage of either 12 VDC +/- 5% or 24 VDC +/- 5%. [L4-CG-IP-RQ-287]

2.7.3   Data and Communication

a) Timing

INTF-003   Instruments shall provide time-stamping capabilities or latency characterization between data sampling and data output. [L4-CG-RQ-450]

Preferences for instrument time stamping capabilities are as follows (best first):

- Time stamp embedded in every data record to the design accuracy of the instrument's clock, using ISO 8601 compliant timestamp
- Time stamp embedded in every data record to the design accuracy of the instrument's clock, using another described, parseable timestamp format
- Time stamp every data sequence, with fixed time between every data record
- Fully characterize the latency between data sampling and appearance of the data at the output connector
- Time stamp embedded in every data record, with precision that is less than the accuracy of the instrument's clock, using ISO 8601 compliant timestamp
- Time stamp embedded in every data record, with precision that is less than the accuracy of the instrument's clock, using another described, parseable timestamp format.

b) Clock Synchronization

INTF-004   Instruments should have an internal clock. This is an objective.

INTF-005   Instruments with internal clocks shall be capable of time synchronization. [L4-CG-RQ-449]

c) Data Rate

INTF-006   Instruments should have a user-settable baud rate, up to 115,200 baud for serial interfaces. This is an objective.

d) Data Format

N/A

e) Protocols

INTF-007   Instruments with an Ethernet interface should provide an auto-discovery mechanism, (e.g., PUCK, Universal Plug'n'Play', ZeorConf/Bonjour). This is an objective.

f) Physical Interface

N/A

g) Electrical Interface

INTF-008   Instruments shall communicate (Data and Commands) while deployed with the OOI infrastructure (e.g. CI device driver or platform interface) via at least one of the following interfaces: Ethernet (10/100 Mb), or serial

EIA standards: RS-422, RS-485, or RS-232. [L4-CG-IP-RQ-297, L4-CG-IP-RQ-291]

   h) Remote Access

INTF-009   Instruments shall be capable of being remotely accessed and controlled via the communication interface. [L4-CG-IP-RQ-294]

INTF-010   All data stored on the instrument shall be accessible remotely over the communication interface.

INTF-011   Instruments should support remote firmware installation. This is an objective.

   i) Modes

INTF-012   Instruments should allow polled and asynchronous mode operation. This is an objective.

2.8   Compliance

COMP-001   To the greatest extent practical, all CGSN infrastructure shall be compatible with applicable national and international standards, including those of the IEEE, ANSI, and IEC.

2.9   Safety

N/A

2.10   Shipping and Storage

2.10.1   Shipping

SHIP-001   Instruments shall be provided with a reusable transportation case with shock mounting.

SHIP-002   Instrument Transportation Cases must fit within an ISO shipping container. [L3-CG-RQ-494]

SHIP-003   Instruments in their transportation cases shall be capable of surviving shipping conditions defined by ASTM D4169 truck assurance level 1. [L3-CG-RQ-432]

2.10.2   Storage

SHIP-004   Instruments shall be capable of being stored with out damage or degradation between -20° and 50° C for periods of up to 12 months.

2.10.3   Safe Handling

SHIP-005   Instrument transportation cases shall have external labels specifying safe handling precautions.

2.11 Identification

2.11.1 Physical Markings

IDNT-001   All components of the p(CO_2) Air-Sea instrument package shall be marked indelibly on an exterior surface. Marking shall include:
- Manufacturer's part number
- Unit serial number
- CGSN part number as defined below:
  - P/N 3305-00006-00001

2.12 Quality

2.12.1 Product Quality

QUAL-001   Instrument packages shall be manufactured in accordance with the manufacturer's best practices. Records of quality assurance tests and inspections shall be available for review by the purchaser.

QUAL-004   A First Article Testing report shall be provided with each first article unit delivered.

QUAL-002   A certificate of compliance shall be provided with each delivered unit. The certificate of compliance shall be supported with copies of the Factory Acceptance Test report and calibration records for each sensor following integration into the unit.

QUAL-003   The materials used in construction of the instrument packages shall be chosen and treated in such a way as to reduce the levels of wear, corrosion and deterioration to allow multiple deployments of each unit.

3.0 Documentation and Support

N/A

4.0 Appendices

4.1   Preferred OOI Standard Connector types.

Instruments should use an MCBH connector installed on the housing. The number of pins, and pinout assignments, should be appropriate to the communication protocol of the instrument, and as shown in the table below. This is an objective.

If the instrument is deployed below the surface, the underwater connector should be water blocked so that there is a back-up o-ring seal in the event that the elastomeric sealing surface delaminates from the metal shell. This is an objective.
(An example of a 6 pin water blocked connector is the MCBH(WB)-6-FS-Ti, manufactured by Teledyne Impulse.)

Protocol	RS-232	RS-232	RS-485 (half duplex)	RS-485 (full duplex)
Pin #	4 Pin	6 Pin	6 Pin	8 Pin
1	Gnd	Pwr Gnd	Pwr Gnd	Data Gnd
2	RXD	RXD	Data B+	RD B+
3	TXD	TXD	Data A-	RD A-
4	12Vdc	12Vdc*	12Vdc*	Reserved
5		24Vdc*	24Vdc*	TD A-
6		Data Gnd	Data Gnd	TD B+
7				Pwr Gnd
8				+Vdc
9				
10				

* Only one voltage will be populated, depending on instrument input power needs.
